Online Backup - Simple, Automatic, Secure

The critical task of data backup can be an expensive and challenging endeavor for any organization. Fortunately, SMARTit makes business-strength backup possible for Windows and Mac environments with an affordable, secure solution that seamlessly integrates into your existing infrastructure. Whether you're the CTO of a large organization, the office manager of a law firm, or an independent IT consultant, we are your business solution for remote data backup.

Security

- **128-bit SSL encryption** — Safely secures your data during transport.
- **AES/Blowfish encryption** — Encryption key using **448-bit Blowfish** encryption or manage your own key using military-grade **256-bit AES** encryption to secure your data during storage.
- **Near Continuous Data Protection** — Automatically detects and backs-up new and changed files.

Performance

- **Automatic or scheduled backups** — Automatic is the simplest method in which backups are performed while your computer is not in use. Scheduled backups can be performed daily or weekly at a specified time of day.
- **Block-level incremental backups** — Saves bandwidth and ensures future backups are lightning fast.
- **Bandwidth throttling** — You can tell the application to use more or less of your upload bandwidth so other higher priority services can run unimpeded.

Ease of Use

- **Version (snapshot) support** — Restore file versions up to 30 days in the past.
- **SQL, Exchange, and network drive support** — Back up data residing on virtually any machine.
- **Windows and Mac support** — Supports Windows (2000, XP, 2003, and Vista, including servers) and Mac OS X (10.4 and 10.5, desktop and server) operating systems.
- **Open/locked file support** — Backs up all open and locked files, including Outlook PST files.
